# TEAMS

## TEAMS **Validation**

TEAMS Validation automatically validates all credit card details including name, card number, cvc code, expiry date, email address, telephone details and address details which will be checked against various 3rd party systems in order to significantly reduce the risk of fraud, charge-backs or potential no-show.

It can also automatically take payments or pre-authorise cards in a safe and secure manner in accordance with your business policy. Funds are banked directly into your hotel bank account.

The process removes time-consuming operational processes and is rapid, efficient, simplified and streamline. If card details are invalid, the system automatically notifies the card user, in order to obtain an alternative method of payment, as well as the booking channel (booking.com, booking engines, etc), where card details are frequently not correctly validated. This automatically reduces the risk of 'fake' bookings.

TEAMS Validation is available in more than 60 countries and currently support all major card types as well as localised payment methods.
